

Micro Nuke Used in Bali "Terrorist" Lookalike Attack

Zionists forcing Australian support for American war on Iraq

Indonesian police use a [long] pole to plumb the depth of the Micro-Nuke crater before dawn breaks

The huge 5' deep Micro-Nuke crater in Kuta Beach that you were never supposed to see

Bottom of crater after slurry was removed with powerful pumps. Sewage continues to leak inside red circle

At 11.05 p.m. local time on Saturday night, a giant blast scattered pieces of the Sari Nightclub right across Kuta Beach in Bali, Indonesia. Though two other synchronized blasts shook the American Consulate and a Philippines travel agency office a few seconds earlier, there were no injuries or deaths at these other locations, both of which served as mere "flash cards" to reinforce the unexpected presence of "Al Qaeda" in this beautiful tourist paradise.

Al who? So far as I am aware, the Muslim world does not yet have access to a sophisticated "Special Atomic Demolition Munitions [SADM]", one of which certainly went critical in a sewer more than four feet below the road bed outside the Sari club. Within five microseconds of detonation the awesome million-foot-per-second shock wave hurled two tons of road bed and sand particles upwards and outward in a deadly fan, cutting tourists to bloody ribbons and hurling body parts for several blocks. The body count is currently 187, with more than 300 injured.

The blast from this weapon was so severe that its detonation terminally damaged 27 buildings in the immediate area, and trashed more than one hundred vehicles. In the words of a tourist who earlier survived attacks on London during the nineties, "I felt my hotel shake violently and ran to look out of the window. In the distance I could see a large white mushroom cloud, and knew I wasn't looking at an ordinary attack."

Photographic evidence proving the use of an unconventional weapon was edited out almost immediately by the major media, though not from the amateur video cameras which provided the pictures above. The very presence of the crater itself proves the weapon was detonated sub-surface, while the crater's depth in combination with its diameter, prove the depth at which the weapon was initially placed.

Flash Burns on Kuta Beach victim and bodies

Anyone doubting the nuclear identity of this weapon should take a look at the biggest car bombs detonated in Northern Ireland during the thirty years of trouble, which ranged in size up to 1,000 pounds of conventional explosive. None of them left craters in the road, because simple physics dictate that shock waves always takes the line of least resistance – largely outwards and upwards to atmosphere. Nor am I aware of any 1,000 pound IRA car bomb trashing 27 buildings and 100 vehicles.

This thousand-pound IRA car bomb was detonated in Omagh during August 1998, killing 29 people but leaving no crater.

An equally valid example would be the Israeli destruction of Arafat's compound in Ramallah. Overall, Israel took more than a week to trash significantly fewer than 47 buildings, despite the fact they were brazenly attacking every day with multiple 120-mm tank guns and Hellfire missiles.

It is factual information like this that helps us to analyze the available evidence at the crime scene, in order to determine which weapon or weapons were used, and hopefully by whom. At the very minimum the damage caused in the Kuta Beach area would require an 8,000 pound HE blast-bomb of the sort used on Hamburg during the Second World War. Problem! How on earth do you squeeze 8,000 pounds of very bulky low-specific-gravity HE into a twelve-inch diameter sewerage pipe, located nearly five feet underground?

Obviously what you need is a specialized weapon significantly less than twelve inches in diameter, but with a blast capability significantly in excess of 8,000 pounds of conventional explosive. Believe me people, there is only one weapon for the job, which explains why you will probably never see the damning crater picture at the top of this page anywhere else.

The actual photograph of SADM shown below is of an early version nominally rated at 10 tons TNT equivalent. More recent variants are as small as a coffee mug, though still very heavy, and have explosive yields ranging from 2 to 100 tons TNT equivalent. Nations possessing such weapons include America, Britain, France, Israel and Russia, with China a distinct possibility. In turn, under top-secret defense agreements with one of more of the above nations, certain Commonwealth and other countries maintain a strictly limited stock of "proxy weapons" on their own sovereign territory.

Bearing in mind the fact that Bali is a hugely popular destination for Australians, many of whom were killed in the blast, the attack seems aimed at shifting Australian public opinion towards an attack on Iraq, or even an attack on Islam in general.

Until now most Australians have been loudly opposed to any premeditated strike on the Middle East, to the point where the only people in Australia blatantly playing "Rambo" and apparently obeying the American Zionists without question, are the Australian Prime Minister and Foreign Minister, plus a loose group of obsequious followers. In fact their blatantly subservient behavior recently offended a member of the opposition so much, he felt moved to publicly call the Prime Minister an "Arse Licker".

Remember both decoys were deliberately detonated several seconds BEFORE the primary charge, ensuring that investigators would be led in the "right" direction when conducting their inquiries after the event. If the two decoys had been triggered AFTER the massive blast outside the Sari Club, nobody would have noticed them.

Before explosives "junkies" swarm all over me, yes I do know that RDX is one of the compounds used in the manufacture of C4 plastic explosive, but it is used far more widely in other explosives including [but not limited to] Compositions A and B, Cyclotol and HBX. These compositions have wide ranging applications such as land mines, shaped-charges, missile warheads, underwater ordnance, and special fragmentation projectiles generally known as cluster bombs.

During the last few hours, Australian officials say they fear that "as many as 89 more Australians may have perished in the blast". Let us be optimistic here and half that figure down to 45 more dead Australians, over and above the bodies that have already been discovered and removed from Ground Zero.

Now ask yourself what class of weapon has the ability to literally vaporize forty-five full grown human beings, to the point where the remaining body parts are so small they cannot be detected by search and rescue crews with the naked eye. Believe me, there is only one class of weapon capable of developing the intense heat and blast pattern needed for the job.

.List of confirmed dead as of 16 October

1. Mugianto (M) Indonesia
2. Kadek Beri Prima (M) Indonesia
3. Anna Sesilia Aviles (F) Equador
4. Christopher Bradford (M) Singapore
5. DJ Sari Club (M) Indonesia
6. Josua K. Daegan (M) Australia
7. Pascal M. Dolf (M) - 8. Faturraman (M) Indonesia
9. Mr. S. Foley (M) - 10. March Benny Gajardo (M) UK
11. Nash Gary (M) Australia
12. Maria Johansson (F) Sweden
13. Chris K. Kays (M) Singapore
14. Bjorn J. Abon Magnusson (M) Sweden
15. Christian Redman (M) Singapore
16. Julie Stephen S. (F) Australia
17. Mr. Stafford (M) UK
18. Achmad Suharto (M) Indonesia
19. Nassima Cladia Tele (F) Germany
20. Jean Underwood (F) France
21. Robin G. Webster (M) - 22. Joshua Illifee (M) Australia
23. Clint Thompson (M) Australia
24. Adam Howard (M) Australia
25. Agus Suhaeri (M) Indonesia
26. David Majendies (M) Australia
27. Kadek Sukerna (M) Indonesia
28. Berry (M) Holland
29. Norbert Frericks (M) Holland
30. Made Martana (M) Indonesia
31. Steven Brooks (M) USA
32. James Corey (M) Australia
33. Findley (F) UK
34. Linda Makwana (F) Australia
35. Aris Munandar (M) Indonesia
36. Deborah Snodgrass (M) USA
37. Michael Stanoring (M) Australia
38. Marlene Doris Whiteley (F) Australia
39. Widayati (M) Indonesia
40. X (F) Unknown
41. Eun Jung Moon (F) Korea
