

# New Energy Sources and Inventions

By Peter Lindemann, D. Sc. (Summary by Fred Burks)

In the late 1880's, trade journals in the electrical sciences were predicting "free electricity" in the near future. Incredible discoveries about the nature of electricity were becoming commonplace. Within 20 years, there would be automobiles, airplanes, movies, recorded music, telephones, radio, and practical cameras. For the first time in history, common people were encouraged to envision a utopian future filled with abundant modern transportation and communication, as well as jobs, housing and food for everyone. So what happened? Where did the new energy breakthroughs go? Was this excitement about "free electricity" all just wishful thinking that "real science" eventually disproved?

**Current State of Technology.** The answer is NO. Spectacular new energy technologies were developed right along with other breakthroughs. Since then, **multiple methods for producing vast amounts of energy at extremely low cost have been developed.** None of these technologies have made it to the "open" consumer market, however. Why this is true will be discussed shortly. First, here is a short list of new energy technologies. The common feature connecting all of these discoveries is that they use a small amount of one form of energy to control or release a large amount of a different kind of energy.

- **Radiant Energy.** Nikola Tesla's [Magnifying Transmitter](#), T. Henry Moray's [Radiant Energy Device](#), Edwin Gray's [EMA Motor](#), and Paul Baumann's [Testatika Machine](#) all run on Radiant Energy. This natural energy can perform the same wonders as ordinary electricity at less than 1% of the cost. It does not behave exactly like electricity, however, which has contributed to the scientific community's misunderstanding of it. The Methernitha Community in Switzerland currently has 5 or 6 [working models](#) of fuelless, self-running devices that tap this energy. [\[More\]](#)
- **Permanent Magnets.** Dr. Tom Bearden has two working models of a [permanent magnet powered electrical transformer](#). It uses a 6-watt electrical input to control the path of a magnetic field coming out of a permanent magnet. By channeling the magnetic field, first to one output coil and then a second repeatedly and rapidly, the device can produce a 96-watt electrical output with no moving parts. [Multiple inventors](#) have working mechanisms that produce torque from permanent magnets alone. [\[More\]](#)
- **Super-Efficient Electrolysis.** Water can be broken into hydrogen and oxygen using electricity. When water is hit with its own molecular resonant frequency, it collapses into hydrogen and oxygen gas with little electrical input. Hydrogen fuel can drive engines ([like in your car](#)) for the cost of water. [\[More\]](#)
- **Cold Fusion.** Though initial claims were debunked, cold fusion is very real. Not only has excess heat production been [repeatedly documented](#), but also low energy atomic element transmutation has been catalogued, involving dozens of different reactions! [\[More\]](#)

There are dozens of other systems. Many are viable and well tested. But this short list is sufficient to make the point: new energy technology is here. It offers the world pollution-free energy abundance for everyone, everywhere. It is now possible to stop the production of "greenhouse gases" and shut down the nuclear power plants. Transportation and production costs for just about everything can drop dramatically. Yet all these wonderful benefits that can make life on this planet so much easier and better for everyone have been postponed for decades. Why? Whose purposes are served by this postponement?

**The Invisible Enemy. There are four forces that have worked together to create this situation. The wealthiest families and their central banking institutions are the first force.** Their motivations are greed and the need to control everything except themselves. Their plan is to eventually control all of the resources of the world, and thereby control everyone's life through the availability of all goods and services. An independent source of wealth (new energy device) in the hands of every person in the world ruins their plans for world domination. They don't want any competition. The weapons they have used to enforce this include intimidation, "expert" debunkers, buying and shelving of technology, and murder of inventors. They have also promoted the scientific theory that states free energy is impossible (laws of thermodynamics).

**The second force is national governments.** The problem here is related to the maintenance of national security. There is a constant jockeying for position and influence in world affairs, and the strongest party wins. In economics, it's the golden rule, which states: "The one with the gold makes the rules." Unlimited energy on this planet will lead to an inevitable reshuffling of the balance of power. Everybody will want it, and at the same time, want to prevent everyone else from getting it. So, national governments' motivations are self-preservation. Their weapons include preventing the issuance of patents based on national security grounds, harassment of inventors with criminal charges, tax audits, threats, phone taps, arson, theft, and a host of other intimidations which make the business of building and marketing a new energy machine impossible.

**The third force consists of deluded inventors and con men.** On the periphery of the extraordinary scientific breakthroughs that constitute real new energy technologies, lies a shadow world of unexplained anomalies, marginal inventions and unscrupulous promoters. The first two forces have constantly used the media to promote the worst examples of this group, to distract the public's attention, and to discredit real breakthroughs by associating them with the frauds. So, the third force is delusion and dishonesty. The motivations are self-aggrandizement, greed, want of power over others, and a false sense of self-importance.

The weapons used are lying, cheating, self-delusion and arrogance combined with bad science.

**The fourth force** operating to postpone the public availability of new energy technology **is all of the rest of us**. It may be easy to see how narrow and despicable the motivations of the other forces are, but actually, these motivations are still very much alive in each of us as well. Like the wealthiest families, don't we each secretly harbor illusions of false superiority and want to control others instead of ourselves? Also, wouldn't you sell out if the price were high enough? Or like the governments, don't we each want to ensure our own survival? Or like the deluded inventor, don't we trade a comfortable illusion once in a while for an uncomfortable fact? Or don't we still fear the unknown, even if it promises a great reward?

**All four forces are just different aspects of the same process. There is really only one force preventing the availability of new energy technology, and that is unspiritually motivated behavior.** New energy technology is an outward manifestation of divine abundance. It is the engine of the economy of an enlightened society, where people voluntarily behave in a respectful and civil manner toward each other. Unspiritualized humans cannot be trusted with new energy. They will only do what they have always done, which is to take merciless advantage of each other, or kill each other and themselves in the process.

**The Opportunity.** What is new is that you and I can communicate with each other now better than at anytime in the past. **The Internet offers us, the fourth force, an opportunity to overcome the combined efforts of the other forces preventing new energy technology from spreading.** What is starting to happen is that inventors are publishing their work, instead of patenting it and keeping it secret. More and more, people are "giving away" information on these technologies in books, videos and websites. While there is still a great deal of useless information about new energy on the Internet, the availability of good information is rising rapidly.

All of us constitute the fourth force. If we stand up and refuse to remain ignorant and action-less, we can change the course of history. Only mass action can create the world we want. The other three forces will not help us put a fuelless power plant in our homes. New energy technology will change everything about the way we live, work and relate to each other. It obsoletes greed and fear for survival. But like all exercises of spiritual faith, **we must first manifest generosity and trust in our own lives.**

**New energy technology is here. It has been here for decades.** Communications technology and the Internet have torn the veil of secrecy off of this remarkable fact. People all over the world are starting to build new energy devices. The bankers and governments don't want this to happen, but can't stop it. Tremendous economic instabilities and wars will be used to distract people from joining the new energy movement. There will be essentially no major media coverage of this aspect of what is going on. It will simply be reported as wars and civil wars erupting everywhere.

Western society is spiraling toward self-destruction due to the accumulated effects of greed and corruption. The availability of new energy technology cannot stop this trend. If, however, you have a new energy device, you may be better positioned to survive the transition that is underway. The question is, who will ultimately control the emerging world government, the first force, or the fourth force? **Some who refuse to fight will survive to see the dawn of the world of new energy. I challenge you to be among the ones who try.**
