Seung-Hui Cho Was a Mind Controlled Assassin

Deadly accuracy, disturbing revelations suggest outside involvement in VA Massacre, cocktail of brainwashing from prozac, violent video games contributed to carnage

Seung-Hui Cho was a mind-controlled assassin, whether you believe he was under the influence of outside parties or not, the fact is that the cultural brainwashing of violent video games and psychotropic drugs directly contributed, as it does in all these cases, to the carnage at Virginia Tech on Monday morning.

Gun grabbers are already exploiting the tragedy to disarm future students from the opportunity of being able to defend themselves against deranged killers, but the media circus is completely silent when it comes to the laying blame at the feet of a deadly cocktail of mind-warping drugs and bloodthirsty shoot-em-ups.

Outside of the obvious culpability of the factors we see in every mass shooting - video games and "antidepressant" drugs, numerous red flags concerning Monday events are beginning to suggest that Cho was more than a heartbroken nutcase with an axe to grind.

Charles Mesloh, Professor of Criminology at Florida Gulf Coast University, told NBC 2 News that he was shocked Cho could have killed 32 people with two handguns absent expert training. Mesloh immediately assumed that Cho must have used a shotgun or an assault rifle.

"I'm dumbfounded by the number of people he managed to kill with these weapons," said Mesloh, "The only thing I can figure is that he got close to them and he simply executed them."

Mesloh said the killer performed like a trained professional, "He had a 60% fatality rate with handguns - that's unheard of given 9 millimeters don't kill people instantly," said Mesloh, stating that the handguns Cho used were designed for "plinking at cans," not executing human beings.

Cho was certainly no slouch, in the two hour gap between the first reported shootings and the wider rampage that would occur later in the morning, during which time the University completely failed to warn the students despite having loudspeakers stationed throughout the campus, Cho had time to film a confession video, transfer it to his computer, burn it onto a DVD, package it up, travel to the post office, post the package, and travel back to his dorm room to retrieve his guns and then travel back to the opposite end of the campus to resume the killing spree. The almost inconceivable speed of Cho's actions become more suspicious when we recall initial reports that there were two shooters.

Even if we rule out the fact that Cho had received expert firearms training, the cultural mind control of violent video games and mind-altering psychotropic drugs were themselves a cocktail of brainwashing that directly contributed to the carnage, as they do in nearly all these cases.

From the very first reports of the shootings we predicted the killer would be on prozac, would have recently been in psychiatric care and would have regularly played violent video games and that has precisely turned out to be accurate in all three instances.

The Internet leader in activist media - [Prison Planet.tv](#). Find out [the true story](#) behind government sponsored terror, 7/7, Gladio and 9/11, [get Terror Storm!](#)

"Several Korean youths who knew Cho Seung Hui from his high school days said he was a fan of violent video games, particularly a game called "Counterstrike," a hugely popular online game in which players join terrorism or counterterrorism groups and try to shoot each other using all types of guns," reports [Newsmax](#) citing the Washington Post.

"In December 2005 -- more than a year before Monday's mass

shootings -- a district court in Montgomery County, Va., ruled that Cho presented "an imminent danger to self or others." That was the necessary criterion for a detention order, so that Cho, who had been accused of stalking by two female schoolmates, could be evaluated by a state doctor and ordered to undergo outpatient care," [reports ABC News](#), " but despite the court identifying the future killer as a risk, they let him go.

Investigators believe that Cho Seung Hui, the Virginia Tech murderer, had been taking anti-depressant medication at some point before the shootings, [according to The Chicago Tribune](#).

Columbine shooters Eric Harris and Dylan Klebold, as well as 15-year-old Kip Kinkel, the Oregon killer who gunned down his parents and classmates, were all on psychotropic drugs. [Scientific studies](#) proving that prozac encourages suicidal tendencies in young people are voluminous and span back nearly a decade.

Jeff Weise, the Red Lake High School killer [was on prozac](#), "Unabomber" Ted Kaczinski, Michael McDermott, John Hinckley, Jr., Byran Uyesugi, Mark David Chapman and Charles Carl Roberts IV, the Amish school killer, were all on SSRI psychotropic drugs.

Since these deadly drugs are prevalent in almost all mass shooting incidents, where is the call to ban prozac? Why is the knee-jerk reaction always to attack the 2nd Amendment rights of Americans to self-defense, [a right that was exercised in January 2002](#) when students subdued a shooter at another Virginia university before he could kill more than three people because they were allowed guns on campus?

Why are the deeper reasons behind what motivates young men to kill pushed aside while control freaks demand that law-abiding citizens be disarmed of the only thing that can protect them from such madmen?

Questions about the sequence of events on Monday, VA Tech, as well as the profile of the killer are arousing increased suspicion.

We have been receiving numerous calls and e mails alerting us to the fact that VA Tech is pulling links from its website concerning their relationship with the CIA. [Reports from November 2005](#) confirm that the CIA was active in operating recruitment programs based out of VA Tech. Several professors from VA Tech are involved in government programs linked with NASA and other agencies.

[Wikipedia also pulled](#) a bizarre recently taken photograph of Cho wearing a U.S. Marines uniform.

Such details only fan the flames of accusations that Cho could have been a Manchurian Candidate, a mind-controlled assassin.

The CIA's program to create mind-controlled assassins that could be triggered by code words, MK ULTRA, is not a conspiracy theory, it's a historical fact documented by [declassified government files and Senate hearings](#). President Bill Clinton himself had to [apologize for the program](#) before he left office.

On the Senate floor in 1977, Senator Ted Kennedy said, "The Deputy Director of the CIA revealed that over thirty universities and institutions were involved in an 'extensive testing and experimentation' program which included covert drug tests on unwitting citizens 'at all social levels, high and low, native Americans and foreign."

One such victim of these experiments was Cathy O'Brien, who [immediately after the shootings re-iterated the revelations](#) in her latest book, that Blacksburg Virginia is a central location for mind control programs that are still ongoing today.

CIA mind control programs can be tracked back to the 1950's and Project BLUEBIRD, later renamed ARTICHOKE. From blogger Kurt Nimmo;

“BLUEBIRD was approved by the CIA director on April 20, 1950. In August 1951, the Project was renamed ARTICHOKE. BLUEBIRD and ARTICHOKE included a great deal of work on the creation of amnesia, hypnotic couriers, and the Manchurian Candidate,” writes Colin A. Ross, MD. “ARTICHOKE documents prove that hypnotic couriers functioned effectively in real-life simulations conducted by the CIA in the early 1950’s. The degree to which such individuals were used in actual operations is still classified.... BLUEBIRD and ARTICHOKE were administered in a compartmented fashion. The details of the programs were kept secret even from other personnel within the CIA.... The BLUEBIRD/ARTICHOKE materials establish conclusively that full Manchurian Candidates were created and tested successfully by physicians with TOP SECRET clearance from the CIA.... As well as being potential couriers and infiltration agents, the subjects could function in effect as hypnotically controlled cameras. They could enter a room or building, memorize materials quickly, leave the building, and then be amnesic for the entire episode. The memorized material could then be retrieved by a handler using a previously implanted code or signal, without the amnesia being disturbed. Hypnosis was not the mind control doctors’ only method for creation of controlled amnesia, however. Drugs, magnetic fields, sound waves, sleep deprivation, solitary confinement, and many other methods were studied under BLUEBIRD and ARTHICHOKE.”

Researchers into supposed "lone nut" assassinations time and time again run across evidence pointing to CIA mind control experimentation. The best example is Sirhan Sirhan, Bobby Kennedy's assassin. Sirhan was found to be in a completely trance-like state after pulling the trigger and couldn't even remember shooting Kennedy when asked about the incident days later. Sirhan's lawyer, Lawrence Teeter, has [presented convincing evidence](#) that Sirhan was under mind control.

Either way you cut it, Seung-Hui Cho was a victim of brainwashing and mind control. The right questions are not being asked and the finger of blame is being pointed in the wrong direction, ensuring that another tragedy like the VA Tech Massacre is almost guaranteed.
