I have just received more, new video from John Walson.

The footage contains some of the most provocative images yet ... stunning examples of these large machines that hover above us in the silence of space.

Whose are they? What are they doing? Are we seeing space weapons platforms? Nuclear-powered? DU gravity-directed bombs?

Microwave or beam weapons? Super-sophisticated spy satellites? Or, are some of these spacecraft not ours at all?

Here are some still frames from the first of two new videos with contrast enhancement...

John has also posted a short video of a single machine. You can see a great deal of detail in this intriguing footage...
