7 Secret Ways We Are Being Poisoned

Activist Post

The objectivism of the scientific method seems to have been hijacked by corporations who often pay for scientists to support their products, as well as politicians who move through the revolving door between the private and public sector. Even worse is that sometimes the consumer protection agencies themselves are complicit.

The trust placed by consumers in scientific studies and Federal oversight committees has been violated in service to profit so that products are allowed to enter the marketplace with reduced safety standards. The synthetic chemicals we encounter on a daily basis in our food, water, and environment are increasingly shown to be disastrous to our physical and mental well-being. Volumes can be written -- indeed *have* been written -- by experts in both mainstream and alternative medicine who have documented the sleight of hand used to hoodwink consumers and threaten our health. The categories below are worth deeper investigation as prime examples of what we might face as a species if this chemical bombardment continues.

- **GMO foods** -- Monsanto started as a chemical company that brought the world poisons like Agent Orange and Roundup. Now they are more well known for their **domination of Genetically Modified agriculture**, owning nearly 90% of staple GMO crops such as corn, soy, and cotton. In independent studies GMO "frankenfood" has been linked to **organ failure**, and a recent Russian study has concluded **near-total sterility** in GMO-soy-fed hamsters by the third generation. Despite these and many other legitimate health concerns, it is unlikely that the **Monsanto-controlled FDA** will curb the growth of GMO foods, while the USDA's biotechnology risk assessment research arm has a paltry **\$3 million** at its disposal. Of course the industry-funded studies show that the effects GMO on human health are "negligible."

- **Food additives** -- When most of us think of harmful food additives we think of **Monosodium Glutamate (MSG)** which is still in many processed foods, but unfortunately MSG appears to be the least of the poisons now found in our food. In 2008 Melamine was found in infant formula and some food products from China; the FDA **went on record** to say it was OK, despite sickening tens of thousands. **Dangerous food additives** appear in nearly all processed foods with even the most common food dyes Red 40, Yellow 5 and Yellow 6 being **linked to cancer**. Most recently **92,000 pounds** of frozen chicken was recalled because it contained "blue plastic pieces," while McDonald's Chicken McNuggets have been found to have "silly putty" chemicals in them. In fact, some researchers estimate that today's chicken is so full of chemicals that it only contains **51% actual meat**.

- **Fluoride** -- Not all fluoride is bad; only the type promoted by dentistry and added to our **water and food** supply. Calcium fluoride is a naturally occurring mineral, while its synthetic counterpart, sodium fluoride (silicofluoride), is an industrial-grade **hazardous waste material** made during the production of fertilizer. Its past history includes **patented use** as rat poison and insecticide. There are many blind- and double-blind **studies** that show sodium fluoride has a cumulative effect on the human body leading to allergies, gastrointestinal disorders, bone weakening, cancer, and neurological problems. In this case, the EPA's Union of scientists issued a **white paper** condemning fluoridation of drinking water. However, as a hazardous waste, it is extremely expensive to dispose of as such. And here might be a clue as to why this chemical, more toxic than lead and almost on par with arsenic, has been disposed of for our consumption.

- **Mercury** -- A dangerous heavy metal in its natural quicksilver form, but more so as the neurotoxin, **methylmercury**, released into the environment by human activity. In both organic and inorganic form, mercury wreaks havoc with the nervous system -- especially the developing nervous system of a fetus. It penetrates all living cells of the human body, and has been documented most as increasing the risk for **autism**. This calls into question mercury's use in **dental fillings, vaccines, and just about anything** containing high fructose corn syrup -- a near staple in the American diet . . . including baby food. But the Corn Refiners Association naturally **supports** this chemical that is "dangerous at any level."

- **Aspartame** -- The king of artificial sweeteners was allowed to the market in 1981 when the U.S. Commissioner of Food and Drugs, Arthur Hull Hayes, overruled FDA panel suggestions, as well as consumer concerns. Aspartame is a neurotoxin that interacts with natural organisms, as well as synthetic medications, producing a **wide range** of proven disorders and syndromes. So who installed this commissioner that would rule against scientists and the public? Donald Rumsfeld, CEO of G.D. Searle; the maker of Aspartame. Rumsfeld was on Reagan's transition team, and the day after Reagan took office he appointed the new FDA Commissioner in order to "**call in his markers**" with one of the most egregious cases of profit-over-safety ever recorded. Aspartame is now **nearly ubiquitous**, moving beyond sugarless products and into general foods, beverages, pharmaceuticals, and even products for children. It recently has been renamed to the more pleasant sounding AminoSweet.

- **Personal care and cleaning products** -- Everyday household items and cosmetic products are applied directly to the

Recent Headlines

an admitted need to tell a misleading tale of industrial relations and complicit "public safety" groups . . . and still only tells half of *that* story. The list of **common products** and their chemical components is encyclopedic. The sum total of the overwhelming presence of these chemicals has been linked to nearly every allergy, chronic affliction, and disease known to man. Most recently, household cleaning products have been linked to **breast cancer** and **ADHD** in children.

- **Airborne pollutants** -- In a NASA **article** titled "Airborne Pollutants Know No Borders" they stated that, "Any substance introduced into the atmosphere has the potential to circle the Earth." The **jet stream** indeed connects all of us. There is one category of airborne pollution that has been conspiracy theory despite a voluminous number of **unclassified documents** from 1977 Senate hearings: chemical spraying (chemtrails) by both private and commercial **aircraft**. Recent **admissions** by public officials strengthen the case. Fallout from these chemical trails has been tested and shows very high levels of **barium and aluminum**. Interesting to note that Monsanto announced that they recently developed an **aluminum-resistant gene** to be introduced. Chemtrails might seem like abject paranoia, but there is a current example of chemical spraying that is undeniable: the **spraying of Corexit** oil dispersant over the Gulf. This process of aerial application can be likened to **crop-dusting**, which we know has been going on for nearly 100 years. Wars abroad even seem to be affecting global air quality, as military munitions such as **depleted uranium** have entered the upper atmosphere, spreading around the planet. The **observable effects** of depleted uranium are not pleasant. Airborne pollutants have been linked to allergies, genetic mutations, and infertility.

This is all leading to scientific, governmental, and medical management of the health and rights of the individual. It is ironic (or coincidental) that when one becomes sick due to the unnatural products listed above, the mainstream medical establishment aims to treat the afflictions with more unnatural chemicals. Furthermore, some of the people at high levels of American government and academia such as John P. Holdren, the current White House Science Czar, have advocated **population control** via "pollution particles" as far back as 1977 in books such as *Ecoscience*. Holdren's **views of humanity** could make one question the intentionality of the poisons in our environment.
