Suspicious acts before 7.3 Christmas quake terrorizes Vanuatu people

December 25th, 2010 3:19 pm ET

Vanuatu earthquake: The earthquake location map on Dec. 25 at 13:16 UTC time, or 8:15am EST. (USGS.gov)

Only several weeks before the 7.3 earthquake hit the South Pacific Island, Vanuatu on Christmas Day, terrorizing locals, all of its seismic monitoring equipment had been stolen, leaving no way to monitor earthquakes in the vicinity of the Port Vila city, no means to warn of tsunami triggers, and less means to determine if the U.S. military is

to blame due to testing environmental warfare technology.

The criminal act of stealing the equipment is suspicious in lieu of military Weapons of Mass Destruction that can trigger or cause what appears to be "natural disasters" for geopolitical gain. (See: [What are environment modification techniques and environmental warfare? Human Rights info 101](#), Dupré, D., *Examiner*, Dec. 6, 2009 and [Global warming and intellectual climate change crisis: Myths, military and WMDs](#), *Examiner*, Dec. 14, 2009)

The Christmas 7.3 magnitude quake hit the Least Developing Country, Vanuatu just after midnight on December 25. It struck about 140 miles (225 kilometers) south of Vanuatu's capital, Port Vila and near Tana Island [according to Associated Press](#). The quake was unusually shallow, only 15 miles below the ocean floor.

On November 9, over vt 1 million dollars worth of earthquake prediction and monitoring equipment was stolen from Vanuatu's Meteorological and Geohazards Department station at Devils Point on Efaté Island [according to](#)

[the nation's newspaper, the Vanuatu Daily Post](#) in its article, *Over Vt1 million worth earthquake equipment stolen again.*

The criminal act is reported as professionally executed, unlike most reported crimes in the Third World nation where developed nation weapons such as guns are highly atypical. Among the world's hungry, Ni-Vanuatu people live on less than a dollar a day and use spears and hand-made weapons for food gathering. "Professional" criminal acts are also atypical.

The *Vanuatu Daily Post* reported that Acting Director, Ms Patricia Mawa said the equipment was stolen around 8:30 a.m. by "thieves that seemed to be familiar with the seismic monitoring devices and telemetry system." The apparent insiders "cut the fence wire, and carefully dismantled the instruments."

"These vital equipment included: one Solar Panel – 80 Watts (as sold by Pacific Power at Fresh Water); a VLF – (Very Low Frequency) Receiving/ Transmitting System, and the cables."

"Without these stations, the people of Vanuatu will no longer be able to get accurate information and timely warnings during events of earthquakes and tsunamis."

On October 1, vital equipment was stolen at one of the other two stations in the Efate Seismic Network, the station at Klem's Hill, according to the Acting Director.

The center stated, "There is apparently no tsunami threat to Hawaii, but 'some coastal areas in Hawaii could experience small non-destructive sea level changes and strong or unusual currents lasting up to several hours" and "sea level changes are expected around 10:51am HST."

God or ENMOD?

Many people attribute the surge in earthquakes and other "natural disasters" to God's work. Others recognize that these disasters can be attributed to military technology applied in a war against the world.

The term, "Environmental modification techniques" refers to any technique for changing - through the deliberate manipulation of natural processes - the dynamics, composition or structure of the Earth, including its biota, lithosphere, hydrosphere and atmosphere, or of outer space. ([Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques, United Nations](#), Geneva: 18 May 1977)

"Environmental warfare" is defined as the intentional modification or manipulation of the natural ecology, such as climate and weather, earth systems such as the ionosphere, magnetosphere, tectonic plate system, and/or the triggering of seismic events (earthquakes) to cause intentional physical, economic, and psycho-social, and physical destruction to an intended target geophysical or population location, as part of strategic or tactical war." (Eco News)

Michel Chossudovsky has reported about military manipulations of the environment in his article, [Excluded from the Copenhagen Agenda: Environmental Modification Techniques \(ENMOD\) and Climate Change - The manipulation of climate for military use:](#)

"The possibility of climatic or environmental manipulations as part of a military agenda, while formally acknowledged by official government documents and the US military, has never been considered

relevant to the Climate debate. Military analysts are mute on the subject. Meteorologists are not investigating the matter, and [environmentalists are strung on global warming and the Kyoto protocol.](#)" (Chossudovsky, M., *Environmental Modification Techniques (ENMOD) and Climate Change*, *Global Research*, December 5, 2009; Also see D. Dupre, [A gory truth about climate change mind control](#), *Examiner*, December 6, 2009)

Wayne Hall reports on Rense.com, that "there remains the task of breaching the secrecy that surrounds the subject. Given that the ecological organizations are clearly not going to do this, we must initiate discussions with them to decide who should be assigned the task. Who is going to bell the cat?" (Hall, W. [Chemtrail Secrets: Strategies Against Climate Change?](#), *Rense.com*, January 2004)

Vanuatu's stretch of small islands is north of Fiji, south of the Solomon Islands and about 1,200 miles from the coastal Australian city of Brisbane. It is in the archipelago called the "Pacific Ring of Fire" where a large amount of volcanic and seismic activity occur, perfect military testing ground for new weapons of mass destruction.

GULF AID URGENTLY NEEDED

Obtain a Wellness Kit for Survival or have one delivered to a Gulf Coast resident in need: See Gulf Coast Barefoot Doctors online or email info@gcbarefootdocs.org. Learn to become a Gulf Coast Barefoot Doctor here. Supplies are not meeting demand. Please help.

Send aid to Gulf victims by visiting Coastal Heritage Society of Louisiana, spearheaded by humanitarians Joannie Hughes and Kindra Arnesen. (See: chsl.webs)

A 7.5 temblor struck under the sea floor only 25 miles (40 kilometers) from Port Vila in August, panicking residents. (AP)
