BRAKING: US weapon test aimed at Iran caused Haiti Quake!

By: Bulov on: 24.01.2010 [01:25] (447 reads)

A US High Frequency Active Auroral Research Program (HAARP) station, Gakon, Alaska
An unconfirmed report by the Russian Northern Fleets says the Haiti earthquake was caused by a flawed US Navy 'earthquake weapons' test before the weapons could be utilized against Iran.

United States Navy test of one of its 'earthquake weapons' which was to be used against Iran, went 'horribly wrong' and caused the catastrophic quake in the Caribbean, the website of Venezuela's ViVe TV recently reported, citing the Russian report.

After the report was released, Venezuelan President Hugo Chavez also made a similar claim, saying that a US drill, carried out in preparation for a deliberate attempt to cause an earthquake in Iran, had led to the deadly incident in Haiti, claiming more than 110,000 lives.

Though Russian Northern Fleets' report was not confirmed by official sources, the comments attracted special attention in some US and Russian media outlets including Fox news and Russia Today.

Russia Today's report said that Moscow has also been accused of possessing and utilizing such weapons.

In 2002, a Georgian Green Party leader claimed that Moscow had instigated an earthquake on Georgian territory, the TV channel said.

According to ViVe, the unconfirmed Russian report says earlier this month the US carried out a similar test in the Pacific Ocean, which also caused another 6.5 magnitude earthquake in an area near the town of Eureka, California.

The California quake resulted in no deaths or serious injury, but left many buildings damaged.

The Venezuelan news website said that the report also introduced the possibility that the US Navy may have had "full knowledge" of the damage that the test could cause.

The report also speculated that knowledge of the possible outcome was why the US military had pre-positioned the deputy commander of US Southern Command, General P. K. Keen, on the island so that he could oversee relief efforts if the need arose.

Based on the alleged report, the ultimate goal of the US weapons tests was to initiate a series of deadly earthquakes in Iran to topple the current Islamic system in the country.

The tests are believed to be part of the United States' High Frequency Active Auroral Research Program (HAARP), which has been associated with many conspiracy theories.

Other than being blamed for earthquakes, HAARP has also been associated with weather anomalies that cause floods, droughts and hurricanes.

Some sources have even linked the 7.8 magnitude quake that shook the Chinese city of Sichuan in May 12, 2008 with the program.

Allegations have been made that since the late 1970's, the US has 'greatly advanced' the state of its earthquake weapons to the point where it is now utilizing devices that employ a Tesla Electromagnetic Pulse, Plasma and Sonic technology, along with 'shockwave bombs.'

Russia has accused the US military of employing such devices in Afghanistan to trigger the devastating 7.2 magnitude earthquake that hit the country back in March, 2002.

In the mid-1990s the Russian State Duma issued a press release on HAARP, which was signed

by 90 deputies. The statement said the US was "creating new integral geophysical weapons that may influence the near-Earth medium with high-frequency radio waves."

"The significance of this qualitative leap could be compared to the transition from cold steel to firearms, or from conventional weapons to nuclear weapons."

"This new type of weapons differ from previous types in that the near-Earth medium becomes at once an object of direct influence and its component," the statement explained.

In 1997, US Secretary of Defense William Cohen also expressed concern about activities that "can alter the climate, set off earthquakes, volcanoes remotely through the use of electromagnetic waves."

The US government, however, has chosen to stick to its position that HAARP is merely a program aimed at analyzing the Earth's ionosphere for the purpose of developing communications and surveillance technology.

You can't *cause* earthquakes per-se

by Syrian on 24.01.2010 [06:26]

But you can induce an earthquake which is going to happen anyway by perturbing the plates with enough force. How much force? Depends on the stability of the plates.

Would an electromagnetic signal from HAARP somehow do it through resonance? I doubt it, but I've yet to do the physical analysis to back that gut feeling. Its just radiowaves, it can't convert into kinetic energy that easily.

Also note

by Syrian on 24.01.2010 [06:28]

HAARP is High Frequency, not low frequency which is what you need to induce resonance over such a large structure as the earth's ionosphere.

OK a correction!

by Syrian on 24.01.2010 [06:38]

HAARP is able to generate

I don't know why my post was cut off but here it is again

by Syrian on 24.01.2010 [06:38]

HAARP is able to generate 0.1Hz waves using the non-linear response of the ionosphere. They use this technique which was first discovered by Norway:

I personally know nothing about

by Lima-P on 24.01.2010 [09:07]

this. But some people claim it was Tesla's Earthquake Machine which did the trick. Joe Vialls would have had a great day with this one, just as he had over the terrible tsunamis.

Some education

by Bulov on 24.01.2010 [15:25]

$E = mc^2 = h \times f$ this simple equation, if you have proper technology can make tectonic plates tremble using high frequency magnetic wave

h – Planck' constant = $6.62606896(33) \times 10^{-34}$ Js

f – frequency of electromagnetic wave (1/second)

c- speed of light in vacuum 299,792,458 metres per second,

m-mass in kg

h ... Plank's constant

Energy is expressed in two forms, particle and wave energy.

Everything in nature is a wave and has its own frequency, including tectonic plates...

h <http://www.youtube.com/watch?v=nu68B7uzLUA>

Lorentz(ian) function significance is due to it being the solution to the differential equation describing forced resonance!!!!

resonance

Rapid amplification of a vibration when the vibrating object is subject to a force varying at its natural frequency. In a trombone, for example, the length of the air column in the instrument is adjusted until it resonates with the note being sounded. Resonance effects are also produced by many electrical circuits. Tuning a radio, for example, is done by adjusting the natural frequency of the receiver circuit until it coincides with the frequency of the radio waves falling on the aerial.

Resonance has many physical applications. Children use it to increase the size of the movement on a swing, by giving a push at the same point during each swing. Soldiers marching across a bridge in step could cause the bridge to vibrate violently if the frequency of their steps coincided with its natural

frequency.

.....

natural frequency

Frequency at which a mechanical system will vibrate freely. A pendulum, for example, always oscillates at the same frequency when set in motion. More complicated systems, such as bridges, also vibrate with a fixed natural frequency. If a varying force with a frequency equal to the natural frequency is applied to such an object the vibrations can become violent, a phenomenon known as resonance.
