[Testimonies of Israeli Crimes in Gaza](#)

Feb 4th, 2009 by [kawther.salam](#)

On February 2nd 2009, two surgeons from the UK, Dr. Ghassan Abu Sittah and Dr. Swee Ang, who managed to get into Gaza during the Israeli invasion, released a statement describing their experiences, sharing their views, and conclusions that the people of Gaza are extremely vulnerable and defenseless in the event of another attack. Their statement was originally published in the magazine [The Lancet Global Health Network](#).

Under the title “The wounds of Gaza”, the two surgeons described the Israeli genocide and war crimes against the Palestinian civilians in Gaza as they observed it. I received the statement of the surgeons from a reader from the Sabra Shatila Foundation in Lebanon. I expect that the Chief Prosecutor of the International Criminal Court ([ICC](#)) in The Hague, Luis Moreno-Ocampo, will take in consideration the testimonies of these two surgeons from the UK, and I remind him of the precedent which was set when he signed an arrest warrant against the Sudanese president on 14 July 2008, despite the fact that the ICC does not have territorial jurisdiction in Sudan.

The full Article : [The Wounds of Gaza](#)

Two surgeons from the UK, Dr Ghassan Abu Sittah and Dr Swee Ang, managed to get into Gaza during the Israeli invasion. Here they describe their experiences, share their views, and conclude that the people of Gaza are extremely vulnerable and defenseless in the event of another attack.

The wounds of Gaza are deep and multi-layered. Are we talking about the Khan Younis massacre of 5,000 in 1956 or the execution of 35,000 prisoners of war by Israel in 1967? Yet more wounds of the First Intifada, when civil disobedience by an occupied people against the occupiers resulted in massive wounded and hundreds dead? We also cannot discount the 5,420 wounded in southern Gaza alone since 2000.

Hence what we are referring to below are only that of the invasion as of 27 December 2008, Over the period of 27 December 2008 to the ceasefire of 18 Jan 2009, it was estimated that a million and a half tons of explosives were dropped on Gaza

Strip. Gaza is 25 miles by 5 miles and home to 1.5 million people. This makes it the most crowded area in the whole world. Prior to this Gaza has been completely blockaded and starved for 50 days. In fact since the Palestinian election Gaza has been under total or partial blockade for several years.

On the first day of the invasion, 250 persons were killed. Every single police station in Gaza was bombed killing large numbers of police officers. Having wiped out the police force attention was turned to non government targets. Gaza was bombed from the air by F16 and Apache helicopters, shelled from the sea by Israeli gunboats and from the land by tank artillery. Many schools were reduced to rubble, including the American School of Gaza, 40 mosques, hospitals, UN buildings, and of course 21,000 homes, 4,000 of which were demolished completely. It is estimated that 100,000 people are now homeless.

Israeli weapons

The weapons used apart from conventional bombs and high explosives also include unconventional weapons of which at least 4 categories could be identified.

- **Phosphorus Shells and bombs**

The bombs dropped were described by eye witnesses as exploding at high altitude scattering a large canopy of phosphorus bomblets which cover a large area.

During the land invasion, eyewitnesses describe the tanks shelling into homes first with a conventional shell. Once the walls are destroyed, a second shell - a phosphorus shell is then shot into the homes. Used in this manner the phosphorus explodes and burns the families and the homes. Many charred bodies were found among burning phosphorus particles.

One area of concern is the phosphorus seems to be in a special stabilizing agent. This results in the phosphorus being more stable and not completely burning out. Residues still cover the fields, playground and compounds. They ignite when picked up by curious kids, or produce fumes when farmers return to water their fields. One returning farming family on watering their field met with clouds of fumes producing epistaxis. Thus the phosphorus residues probably treated with a stabilizer also act as anti-personnel weapons against children and make the return to normal life difficult without certain hazards.

Surgeons from hospitals are also reporting cases where after primary laparotomy for relatively small wounds with minimal contamination find on second look laparotomy increasing areas of tissue necrosis at about 3 days. Patients then become gravely ill and by about 10 days those patients needing a third relook encounter massive liver necrosis. This may or may not be accompanied by generalized bleeding, kidney failure and heart failure and death. Although acidosis, liver necrosis and sudden cardiac arrest due to hypocalcemia are known to be a complication of white phosphorus it is not possible to attribute these complications as being due to phosphorus alone.

There is real urgency to analyze and identify the real nature of this modified phosphorus as to its long term effect on the people of Gaza. There is also urgency in collecting and disposing of the phosphorus residues littering

the entire Gaza Strip. As they give off toxic fumes when coming into contact with water, once the rain falls the whole area would be polluted with acid phosphorus fumes. Children should be warned not to handle and play with these phosphorus residues.

- **Heavy Bombs**

The use of DIME (dense inert material explosives) were evident, though it is unsure whether depleted uranium were used in the south. In the civilian areas, surviving patients were found to have limbs truncated by DIME, since the stumps apart from being characteristically cut off in guillotine fashion also fail to bleed. Bomb casing and shrapnel are extremely heavy.

- **Fuel Air Explosives**

Bunker busters and implosion bombs have been used. There are buildings especially the 8 storey Science and Technology Building of the Islamic University of Gaza which had been reduced to a pile of rubble no higher than 5-6 feet.

- **Silent Bombs**

People in Gaza described a silent bomb which is extremely destructive. The bomb arrives as a silent projectile at most with a whistling sound and creates a large area where all objects and living things are vaporized with minimal trace. We are unable to fit this into conventional weapons but the possibility of new particle weapons being tested should be suspected.

- **Executions**

Survivors describe Israeli tanks arriving in front of homes asking residents to come out. Children, old people and women would come forward and as they were lined up they were just fired on and killed. Families have lost tens of their members through such executions. The deliberate targeting of unarmed children and women is well documented by human right groups in the Gaza Strip over the past month.

- **Targeting of ambulances**

Thirteen ambulances had been fired upon killing drivers and first aid personnel in the process of rescue and evacuation of the wounded.

- **Cluster bombs**

The first patients wounded by cluster were brought into Abu Yusef Najjar Hospital. Since more than 50% of the tunnels have been destroyed, Gaza has lost part of her lifeline. These tunnels contrary to popular belief are not for weapons, though small light weapons could have been smuggled through them. However they are the main stay of food and fuel for Gaza. Palestinians are beginning to tunnel again. However it became clear that cluster bombs were dropped on to the Rafah border and the first was accidentally set off by tunneling. Five burns patients were brought in after setting off a booby trap kind of device.

Death toll

As of 25 January 2009, the death toll was estimated at 1,350 with the numbers increasing daily. This is due to the severely wounded continuing to die in hospitals. 60% of those killed were children.

Severe injuries

The severely injured numbered 5,450, with 40% being children. These are mainly large burns and polytrauma patients. Single limb fractures and walking wounded are not included in these figures.

Through our conversations with doctors and nurses the word holocaust and catastrophe were repeatedly used. The medical staff all bear the psychological trauma of the past month living through the situation and dealing with mass casualties which swamped their casualties and operating rooms. Many patients died in the Accident and Emergency Department while awaiting treatment. In a district hospital, the orthopaedic surgeon carried out 13 external fixations in less than a day.

It is estimated that of the severely injured, 1,600 will suffer permanent disabilities. These include amputations, spinal cord injuries, head injuries, large burns with crippling contractures.

Special factors

The death and injury toll is especially high in this recent assault due to several factors:

- No escape: As Gaza is sealed by Israeli troops, no one can escape the bombardment and the land invasion. There is simply no escape. Even within the Gaza Strip itself, movement from north to south is impossible as Israeli tanks had cut the northern half of Gaza from the south. Compare this with the situation in Lebanon 1982 and 2006, when it was possible for people to escape from an area of heavy bombardment to an area of relative calm - there was no such option for Gaza.
- Gaza is very densely populated. It is eerie to see that the bombs used by Israel have been precision bombs. They have

a hundred percent hit rate on buildings which are crowded with people. Examples are the central market, police stations. Schools, the UN compounds used as a safety shelter from bombardment, mosques (40 of them destroyed), and the homes of families who thought they were safe as there were no combatants in them and high rise flats where a single implosion bomb would destroy multiple families. This pattern of consistent targeting of civilians makes one suspect that the military targets are but collateral damage, while civilians are the primary targets.

- The quantity and quality of the ammunition being used as described above.
- Gaza's lack of defense against the modern weapons of Israel. She has no tanks, no planes, no anti-aircraft missiles against the invading army. We experienced that first hand in a minor clash of Israeli tank shells versus Palestinian AK47 return fire. The forces were simply unmatched.
- Absence of well constructed bomb shelters for civilians. Unfortunately these will also be no match for bunker busters possessed by the Israeli Army.

Conclusion

Taking the above points into consideration, the next assault on Gaza would be just as disastrous. The people of Gaza are extremely vulnerable and defenseless in the event of another attack. If the International Community is serious about preventing such a large scale of deaths and injuries in the future, it will have to develop a some sort of defense force for Gaza. Otherwise, many more vulnerable civilians will continue to die.

Dr Ghassan Abu Sittah and Dr Swee Ang

First of all i wanted to congratulate you for having such a interesting site & for all the hard work you are doing to the Palestinian Cause.
 I've been reading your blog for quite i while now,i found it through the links that “rense.com” post on his website & i really enjoy your articles.
 Last month started to write up a blog my self called: “Death to Zionism” & ive posted a couple of articles from your site,i hope thats alright with you,anywas i just wanted to let you know.
 Thanks again for all this hard work you do.
 Peace
 Omar.

Concerning the subject of intelligence, that Israelis are so proud to posses , please consider the following logic. The main difference between one who is Intelligent and one who is Wise, is, that one who is truly Wise realizes how little he truly knows and thus proves his intelligence. This person is usually humble. It should be obvious by observing the world that there are many people that are very “intelligent” but clearly can not be considered as Wise. These people are usually arrogant and what is worse, can be very “intelligent” psychopaths.

Dictionary definition of a psychopath:

A person with an antisocial personality disorder, manifested in aggressive, perverted, criminal, or amoral behavior without empathy or remorse.

empathy Identification with and understanding of another’s situation, feelings, and motives.

A defining element of a psychopath is that they do not and probably cannot empathize with other people. They are often good at imitating this, but in doing so they are using it in a cold and manipulative way.

This lack of empathy is one thing that makes a psychopath so dangerous. If we cannot empathize with others then we are unlikely to care about them. Psychopaths can thus easily objectify other people, treating them like ‘things’ and even killing them without any remorse.

It should be clear with this logic that Zionists are clearly Psychopaths !

Some interesting links concerning historical facts related to the origin of Hebrews:

Jews are not Israel. See - God save America Again. Lies do not change the Truth. Obadiah 18. Matthew 13. The King has declared - His Angels will harvest the tares...can there be any doubt as to who “the Tares” are at this point ? John 8:44...Jesus wasn’t speaking yiddish! Thank you for your Courage. The world, and Christendom owe you a debt of

gratitude. All who desire peace should seek to KNOW THE TRUTH. Justice is coming !

Your rules for posting: No extreme website links. Isn't this an extreme website? Calling Shula Cohen a prostitute isn't extreme?

Answer: No. That she was a prostitute, a madam, and also involved in other less than honorable activities, is just what I dug up from various sources, it is also what various Israelis who knew her family told me, and it was also published in Yediot Ahronot, and even her son David Kishik, himself a thief, never objected to these statements because he knew that they were true. If that offend you, I suggest you go and complain to her about the extreme life she led. I can't change history.
