ELRON - VOXEO

The Israeli Defense Firm That Tallies The Iowa Caucus

By Christopher Bollyn

1-1-8

The Iowa caucus is only a few days away and the nation's attention will be directed to the results, which signify the beginning of the U.S. presidential race. But does anyone watch who tallies the results of the Iowa caucus?

The Iowa caucus results were tallied in 2004 by a company that is headed by a man whose company was bought by Elron Electronics, the Israeli defense firm. I suspect that it will be the same this year. Don't expect to see any grassroots political activists doing the tally in Iowa. The Israeli defense establishment takes care of that part of the American "democratic" election process.

VOXEO

In the summer of 2004, I first learned that a foreign and out-of-state company using Interactive Voice Response (IVR) technology tallied the Iowa caucus results.

The system used to tally the 2004 Iowa caucus results was provided by a company called Voxeo, which was apparently based in Orlando, Florida. (Yellow flag goes up in the mind of those familiar with Orlando and electronic vote fraud history. See Bollyn article on Wang below.)

The calls from the nearly 2,000 caucus centers in Iowa went to a Voxeo call center in Atlanta, Georgia.

On January 31, 2005, I wrote to Michelle Bauer, Iowa's Secretary of State with some questions about the use of Voxeo, a foreign company located in Florida, to tally the results of the Iowa caucus:

Subject: How was the Iowa Caucus Tallied?

Dear Sirs,

When I visited the headquarters of the Democratic Party in Des Moines last summer, I learned that the tally of the Iowa caucus had been "out-sourced" to a company in Atlanta, Georgia.

What this means is that the tallying of the Iowa caucus results was done over the telephone, using the touch-tone buttons, to enter the results from each caucus locationS

I am interested in how this was done, and why. Why did the Democratic Party allow the crucial tally of the caucus results to be done by a company in Atlanta? Don't they trust their own math skills?

Can any of you provide any information about this matter?

Kind regards,
Christopher Bollyn

A person named Mike Milligan wrote back on behalf of Secretary of State Bauer:

Mike Milligan wrote:
Dear Christopher:

The Secretary of State forwarded me the email you sent to then on Monday, January 31, 2004 [sic] regarding the Iowa Caucuses.

Unfortunately, you either received some incorrect information in your travels or are confused. The Iowa Democratic Party completed all of the caucus night tabulations in Iowa, in the Des Moines/Polk County Convention Center, which was the Caucus night HQ. In fact, our tech staff wrote the software that tabulated the results.

To answer your second to last question, we feel we have a comfortable grasp of mathematics.

Sincerely,
MWM
Mike Milligan,
Executive Director Iowa Democratic Party
(515) 244-7292 ex. 676

I wrote this note back to Mr. Milligan:

Dear Mr. Milligan,

I am responding to you about how the caucus results for the Iowa Democratic Party were tallied on the night of the nation's first caucus. After checking my sources, I can assure you that it is correct that an out-of-state telephone/computer system tallied the Iowa precinct results.

The system used was provided by Voxeo Corporation based in Orlando, Florida. The calls went from Iowa to a call center in Atlanta, Georgia.

See: <http://www.voxeo.com/>

This information was first provided to me last August by John McCormally, Communications Director for the Iowa Democratic Party in Des Moines, Iowa.

Today I called Voxeo (800) 305-5771 in Orlando and although I didn't go into detail, the receptionist confirmed that Voxeo had conducted the telephone tally of the Iowa Democratic Caucus results.

How is it that you don't know that?

McCormally told me that chairmen were selected in all 1,993 precincts and these chairmen called in on touch-tone phones and after giving their PIN number, were able to enter the results from their precinct using the touch-tone number pad.

I'm not going to go into great detail at this point, but this procedure of using an out-of-state computer company to tally the precinct results for the Iowa Democratic Caucus lacks the transparency and openness that one might expect in this exercise in grass-roots poll.

Clearly, if someone wanted to adjust the results, it would be the easiest thing to do to do it through this computer system in Orlando, Florida. The Democrats in Iowa would never be aware of it, regardless of their math skills, unless the paper results were carefully audited in an open and honest manner.

Christopher Bollyn

THE ISRAELIS & VOXEO

Now, who really is Voxeo, and why are the Iowa caucus results tallied by them? I don't know if the 2008 Iowa results will be tallied in the same way, but I wouldn't doubt it.

Voxeo is headed by Jonathan Taylor, who is the company's President and CEO. This is what his Voxeo webpage says about him:

Jonathan combined his experience in both business operations and technology innovation to found Voxeo in 1999. Under his guidance, Voxeo has seen triple-digit revenue growth for four consecutive years and has been profitable since January, 2004. Prior to Voxeo, Jonathan founded and helped bring three additional software and infrastructure service companies to profitability.

"From 1995 to 1997, Jonathan was the founder and President of InterResearch and Development Group (IRdg), Inc. IRdg created and

licensed iPost - the first internet powered OEM unified messaging solution - to leading telecommunications providers including Ericsson,

Motorola and Unisys. IRdg was acquired by Elron Electronic Industries (Nasdq: ELRN) subsidiary MediaGate in 1997."

There you have it. Jonathan Taylor's company, which he founded, was taken over by Elron Electronic Industries, the Israeli defense high tech company:

In its early days, Elron focused on defense, particularly electronics and avionics, as well as the emerging medical and technology sectors. In 1966, Elron founded Elbit, which combined the expertise of the Ministry of Defense-Research Institute in special computer design with Elron's experience in electronic product design, manufacture and management. Source: <http://www.elron.net/default.asp?Pa...>

This is important information that Americans need to know and which they will not find in the Zionist-controlled media in the United States. It needs to be understood that the entire election process in the United States is a fraud. More than that, it is a fraud that is being perpetrated by the Israeli defense establishment on the naïve and gullible American public.

The sine qua non of an honest and transparent election process is the open counting of the votes by the voters themselves in each polling station in front of the open eyes of other citizens and members of the media. Any compromise in this most fundamental and essential process which acts to remove the citizenry from the vote-counting process simply cannot be accepted.

This is what Americans MUST get back to, in every polling station in the nation: paper ballots that are hand counted in front of the public.

Nothing else will do to protect their democratic franchise in the United States - NOTHING.

Reporter Chris Bollyn Proves Why WE Must Watch and PUBLISH Iowa Count! December 31st

This article focusus on the DEMOCRATIC PARTY process in 2004, which probably explains how John Kerry went from no where to "winner" in the Iowa Caucus that year.

Bollyn's article is shocking, and he and his family are now in hiding outside the USA after being tasered for no reason by two Homeland Security-trained plain clothes policemen in Hoffman Estates, Illinois (near Chicago) in 2006. Also see Bollyn's article, "How a Private Company Counts our Votes on Election Night" linked on the home page of votefraud.org in the lower left hand blue box.

This excellent reporting underscores why all Iowans and NH voters must support Watch the Vote 2008 and the newly up tally board at:

www.LibertyBroadcastNetwork.org -- In-home correspondents will be listed for each county in Iowa. Now all we need is for the Iowa Caucus goers to do one more thing before they go home on Jan 3, Iowa Caucus nite: make a cell phone call to the in-home correspondent assigned to your county at www.LibertyBroadcastNetwork.org -- and report the eye-witness results you saw at your caucus. This is how to checkmate any chicanery in the GOP Iowa Caucus (or the Democratic).

(The list of in-home correspondents assigned to your county should be up anytime on LibertyBroadcastNetwork.org. There will also be an open nationwide conference call on Iowa Caucus nite so people can call in and ask questions anytime throughout the nite if there is any uncertainly on what to do or who to call on the actual Caucus nite.)

It is important to note that LibertyBroadcastNetwork.org has set up a system that goes live IMMEDIATELY on the internet, with updated tallies. The plan announced by Ron Paul HQ in Iowa appear useless, as Drew Ivers and the other decision makers there are planning to keep the tally secret. Without going public -- what keeps the Iowa GOP and the Big TV Network consortium (now called National Election Pool, formerly Voter News Service) honest?
