New Gulf oil sheen, same old gusher, deadly hype: Ex-oil executive

Gulf of Mexico oil sheen from same old gusher, a dog and pony show revival as Robert Kaluza is allowed to remain silent

[Dead fish and other animals](#) floating [downstream in Louisiana](#) head toward fresh oil slicks "all over" Gulf of Mexico's north quadrant, a BP image nightmare [according to](#) attorney Stuart Smith on Thursday, as AP [reported BP](#) investigating but denying the sheen source is near "existing BP operations," after which former oilfield executive Ian Crane told the *Examiner* Friday that the real sources of the Gulf problem remain: the well was never capped and Robert Kaluza has never testified. Crane's two assertions had been espoused by the chief Gulf oil whistleblower, Matt Simmons, until silenced with his untimely death just over a year ago, on August 8, 2010.

"One charter boat fishing captain, who frequents the waters around Louisiana's barrier islands, is describing the current, hauntingly familiar situation on the Gulf as the 'second wave' of the BP disaster," reported environmental attorney Stuart Smith on Thursday, stating that the oil sheen has many people scratching their heads, questioning the source of the oil sheen.

"BP did not make clear Thursday what the source of the new sheen was, but told *The Associated Press* in London it was not found near 'any existing BP operations,'" [reported AP](#) Thursday.

While source of the oil slick may be questioned by many, and some call it a "second wave," it is neither mystery nor "second wave" according to key whistleblower oil insider Ian Crane who concurs with the late oil guru and chief Gulf whistleblower, the late Matt Simmons.

Former oilfield executive, [deep geopolitical analyst](#) Ian R. Crane told Dupré in a telephone interview Friday,

that to dismiss the work of Simmons helps further the Gulf operation "sham."

As long as media and Gulf "activists" continue believing and furthering the notion that the well gushing most of the oil was capped, BP has no liability according to Crane.

"Once the well was 'capped,' BP had no liability. That's what the court ruled in June. Since oil is no longer flowing from the *Macondo* well, they have no liability for costs."

The oil source probably causing the slick is the same source never shown on television, as oil guru and leading [Gulf of Mexico oil crime whistleblower](#), the late Matt Simmons, had said according to Crane.

Simmons' life tragically ended days after he was proven correct that the "Macondo Well Capping" was a TV sham and he turned on the oil industry, developing a renewable wind energy project, Crane said.

Native of British Petroleum's birth nation, Crane is also campaigning internationally to get to the real bottom of the Gulf of Mexico catastrophe.

The April 22, 2010 Gulf oil explosion is still causing immeasurable related diseases, health injuries, especially to children and women Gulf Coast region residents, and untold deaths, a "[planned depopulation event](#)" according to both Crane and Simmons, while one smoking gun remains tucked away with help of the Obama administration and the U.S. Congress. (Watch the Youtube by Ian Crane embedded on this page left.)

"Until the man who was placed there on the rig the night of April 16th to make this happen, everything else is a smokescreen," Crane said, adding that as long as this does not happen, there are profits to be made off of the catastrophe and that people are being led by classic examples of controlled opposition.

The smoking gun Crane refers to, and Matt Simmons had referred, is no other than Robert Kaluza, consistently covered-up with hype, distracting the public from the real Gulf catastrophe source and solutions according to Crane.

"Only if we can get the people to focus on Kaluza can there be real justice," Crane told Dupré.

"He was placed there on the rig the night of April 16th to make this happen.

"To omit any of these observations by Simmons and to omit Bob Kaluza is a smokescreen."

"It gives the impression that people are really committed to holding perpetrators of the Gulf catastrophe accountable, while in actuality, Kaluza and BP are free and clear, and the real liability of BP is mitigated."

Gulf oil gush near where 'officially killed,' theories gush far from truth

Smith reported that a fleet of twenty boats has rushed to the scene of Deep Water Horizon's Macondo Well where the gushing oil "was officially 'killed' in September 2010."

"Fresh oil, only slightly weathered, is washing ashore in areas hit hardest by last year's massive spill, like Breton Island, Ship Island, the Chandeleurs and northern Barataria Bay. BP has reactivated its Vessels of Opportunity (VoO) program to handle cleanup.

"It's a sickeningly familiar scene that has fishermen, researchers and public officials searching for answers, as haunting memories of last year's calamity come roaring back."

According to Smith, "BP is scrambling to contain both the crude and the PR nightmare that waits in the wings."

"Reliable sources tell us that BP has hired 40 boats from Venice to Grand Isle to lay boom around the Deepwater Horizon site – located just 50 miles off the Louisiana coast."

One year and a couple of weeks after the death of Simmons, as oil and tarballs continue washing ashore and add to the [Gulf Dead Zone](#), many ask the same "fifty-thousand-dollar question" according to Smith: "Where is all the new oil coming from?"

AP reported Thursday, "London-based BP spokeswoman Sheila Williams admitted that 'there is a lot of sheen in the Gulf of Mexico area' but that the substance did not necessarily come from a BP site or well. "Geohazards specialist" BK Lim is among those who continue focusing on the televised attempted Macondo Well capping "sham" instead of the second well gushing oil, and continue to not focus on Robert Kaluza testifying according to Crane.

According to Smith, Lim [says](#) the worst part of the new oil sheen "development" is that "oil may be coming from cracks and fissures in the seafloor caused by the work BP did during its failed attempts to cap the runaway Macondo Well – and that type of leakage *can't* be stopped, ever."

Simmons had stated soon after the catastrophe began that the gusher could not be stopped. Then, right after [Tropical Storm Bonnie](#), he said the televised BP well capping of the real gusher never occurred at all and was only a "sham."

Simmons, humanitarian who called Gulf oil catastrophe 'tragedy and national emergency'

Tropical Storm Bonnie's threat was what reportedly called from bringing in boats and televised ROV from the Gulf, to prevent damage. After Bonnie, the televised well coordinates changed, as noted by Simmons who began stating not only that the oil volcano could not be stopped, but that the source of the oil gusher was not where media showed.

It was then that Simmons withdrew from his esteemed position as chief oil guru and became a renewable energy guru, developing a massive wind energy project.

It was also then that Simmons became the main enemy of the oil industry according to Crane.

Agreeing with Simmons, former ex-oilfield executive Ian Crane commented on his Facebook page after Smith's article was shared there:

"The Macondo Flow was never capped! It's just that BP can't pump enough COREXIT into the plume to prevent it from reaching the surface!! The Gulf of Mexico is a TOXIC SOUP of Oil, COREXIT and Genetically Modified Micro-Biology!!"

Simmons had told *MSNBC* on July 16, 2010 that BP was lying because if it acknowledges the truth, "they'll go to jail," as Dupré reported in ["Censored Gulf news: 'Heavy' resident death toll predicted, 'Cap' sham. Whistleblower \(video\)"](#).

The former lead Gulf [oil crime whistleblower, Simmons](#) repeatedly said the well shown to the public on TV was not the real problem, only a big psychological operation, [a "sham."](#)

Blowing the whistle on the oil giant BP shortly after its rig exploded, Simmons experienced same heavy-handed bullying other whistleblowers do. Having predicted the never-ending oil gush and heavy death toll, he faced dozens if not hundreds of media reports referring to him as "Dr. Doom":

"[Discrediting the messenger] is just another spoke in the Gulf psyop wheel that just keeps on rolling and churning over the public to oppress, control and worse. It's the same psychology used as the foundation of television and mainstream press - all designed to fool the public without it knowing.

**"Fortune magazine's headline to its June 9 interview with Simmons read, 'The Gulf Coast Oil Spill's Dr. Doom.'
('Censored Gulf news: 'Heavy resident death toll predicted, 'Cap sham. Whistleblower (video)')**

Nevertheless, the "Terrier of the Gulf," as Crane refers to Simmons, continued his mission in opposition to government media, asserting, **"TV has been fooling the public since the beginning of the Gulf catastrophe and government has allowed it."** (["Censored Gulf news: 'Heavy' resident death toll predicted, 'Cap' sham. Whistleblower \(video\)"](#))

Despite media ridicule, Simmons maintained his position about Well B being the major oil volcano, BP's fraud, plus the need for Robert Kaluza to testify. he did so until shortly before his untimely death. On July 16, Dupré wrote:

"At a Camden, Maine meeting, attendees heard Matthew Simmons explain how BP knowingly failed to respond appropriately and then lied; how TV participated in a massive psyop helping BP; and how the worst on human health is yet to come according to [Christine Parrish in The Free Press](#) on July 15, 2010.

[Simmons had further stated](#), "There is no way BP would not know they were misleading everyone. They would have to be deaf, dumb, and blind and they're not. These are smart guys."

"What you are seeing on television, what BP is saying about relief wells . . . that's a total ruse. The real blowout is "an open hole gushing 120,000 barrels of toxic crude every day below the surface of the Gulf six or seven miles away from the riser - and BP is ignoring it," Simmons said.

"Any other company would have fessed up right away and called this what it was: *a tragedy and a national emergency.*"

And the plugged hole? Another sham, as was that the notion that the relief well would work to divert pressure from the original well so it could be plugged with mud and cement.

"It's a sham," Simmons said. "Relief wells only work if there is casing in the hole."

Three weeks after Simmons told *MNSBC* that BP was lying to keep from going to jail, on August 6, a land surveyor citizen reporter demonstrated, with public documents, the two exploratory wells, and the one that major TV networks continually showed [Well "A"] was not the one gushing, [Well "B"], as Simmons repeatedly explained.

In the article "[Breaking Gulf news: Land Surveyor proves Simmons right. TV well sham](#)," Dupré wrote:

"Ammunition, fired from the petrochemical-military industrial complex (PMIC) [Disinformation non-lethal weapon aimed at the American public and the world](#), has been blocked, at least momentarily, by one man, a former land surveyor demonstrating Matt Simmons has been correct about the [TV Gulf reporting sham](#) and two wells. The surveyor presents the most damning evidence that the operation has been planned and orchestrated with expertise, as [AC Griffith publicly stated this week](#).

"The well that the reader sees on TV reports about the oil capping and other scenes are illusions. What the reader hears most talking heads say about the catastrophe is pacification and distraction. The surveyor calls it a 'dog and pony show.'"

"According to public documents, not only are there the two wells Matt Simmons has insisted exist. The documents also reveal that the plan since the beginning of the operation has been to abandon both wells." ([Breaking Gulf news: Land Surveyor proves Simmons right. TV well sham.](#))

The following comment was posted under that article: (Also see: "[Gulf oil whistleblower, renewable energy guru Matt Simmons RIP \(videos\)](#)")

"I tried to verify Land Surveyors information and checked the initial exploration plan. I can confirm what he [Land Surveyor] shows us in his videos. I advise everyone, who doubts this information, to read the plan for himself. Since I cannot post the direct link - google: gomr bp initial exploration plan Mississippi Canyon Block 252 (the pdf file takes some time to load). On page 8 the proposed activity is listed: Well location "A": Start Date 04/15/2009; End Date 07/24/2009 Well location "B": Start Date 04/15/2010; End Date 07/24/2010 The Deepwater Horizon oil spill happened on the 20th April of 2010. The coordinates for well "A" are: X: 1202,803.88' Y: 10,431,617.00' The coordinates for well "B" are: X: 1202,514.00' Y: 10,431,494.00' Countless youtube videos of the remotely operated vehicles (ROV) show, that the ROV operated much closer to well A, than to well B."

Another commenter asked, "Does anyone appreciate the full significance of these findings?"

Crane says he does.

He vowed Friday to never stop providing information needed for the Gulf of Mexico oil catastrophe planned depopulation event to be exposed, its perpetrators held accountable, and its victims compensated.

Each of those three activities depend on Robert Kaluza testifying, according to Crane, although not demanded by many of the highest profile Gulf "activists."
